

'Elektron' Balanced Interconnect Cable

Eight solid-core high-purity copper conductors form the signal path while a highly effective shield protects the waveform against external interferences. The

EINSTEIN 'Elektron' exhibits realistic dimensionality and tonal body plus an expressive vocal range and naturally warm treble. Bass demonstrates authority and weight

as well as speed and control. The 'Elektron' is an extremely low-microphony interconnect.

- highly resistive, low capacitance design
- easy load on the source
- eight solid-core conductors of staggered diameters

- high-purity copper with Teflon dielectric
- rubber sleeve
