

'The Final Cut' OTL Mono Amplifier MK 23

Dedicated to higher-efficiency loudspeakers, 'The Final Cut MK23' sports OTL output-transformer-less circuitry identical to the MK60, downscaled merely for lower power requirements but still without the common loss of bass control due to

insufficient damping factors. 'The Final Cut' achieves the sophisticated midband presence of a 300B S.E.T. or 211 but adds exploded bandwidth and dynamics beyond any audible limits – a true watershed phenomenon in tube technology.

- Dual-differential, fully balanced circuitry from input to output
- No output transformers
- Shortest signal path with point-to-point wiring
- High damping factor
- Low harmonic distortion
- Wide operational bandwidth
- S/N ratio → 95dB

- THD ← 0.05%
- Damping factor 90/8-ohm, 45/4-ohm
- Output power 20 watts into 8 ohms, 12 watts into 4 ohms
- Tube complement per monoblock: 2 x 6C33 power triode, 5 x E88CC/6922 dual triodes
- Weight 30 kg/ea.
