

'The Power Cord' / 'The Shield' powercord

'The Power Cord' shields against electromagnetic interferences and works with many different components. The price/quality factor is exemplary.

'The Shield' uses a densely woven double shield and then add a foil wrap against capacitive coupling. Multi-strand construction protects against external noise pickup. The

large conductor diameter reduces contact resistance to make 'The Power Cord' ideal even for current-hungry high-power amplifiers.

- highly effective triple-shielded mains cable
- larger diameters for lower connection resistance
- pure copper conductors
- Anti-static foil
